Note: For the countries of the Caribbean, maritime tourists visits have been adjusted to reflect a 1 day permanency if arrival was by cruise ship/ x days of permanency if arrival was by air, due to the fact that the longer the stay, there is a greater factor of probability of mortality rate.\* Data for arrivals of tourists corresponds to arrival by air, excluding maritime tourists.\*\* Includes all tourists of the American Continent. Source: Institute of Statistical Data from each country (arrival per tourist) and U.S. Department of State - Bureau of Consular Affairs (American deaths).
